FEEDING DIRECTIONS

Tizwhiz Show Rabbit is nutritionally complete, and no additional feeding of hay or grain is necessary. The following feeding recommendations are for rabbits of New Zealand size. Adjust size for other breeds.

Gestation: First 2 weeks feed 3-4 oz per doe, once a day. Gradually increase feed to 6 oz during last 2 weeks before kindling. Normal gestation is 31 days.

Lactation: First 2 days feed 3 oz per doe, once a day. Gradually increase feed by adding 1 oz per day until feed level is sufficient for satisfactory maintenance.

Young Rabbits: Self feed until proper weight and condition is maintained.

Bucks: Feed 3-4 oz once a day, or enough to keep in good condition. Do not over feed.

Always provide access to plenty of fresh, clean water. Keep surroundings clean and free of parasites and dirt.
